Fully Functional for 30 Days

SolarWinds® Web Performance Monitor tracks response time for all of your websites and internal (behind the firewall), customer-facing, SaaS, and cloud-based applications. Web Performance Monitor is incredibly easy to license, setup, and use. Further, it offers the powerful, scalable features you need at a price you simply can't beat.

Web Performance Monitor at a Glance

- Detect slow page load speed for each page in a transaction—well ahead of customer emergencies
- Agentless & secure user experience testing from multiple locations inside or outside your firewall
- Web-based dashboards to quickly identify Website load times by location, page, or transaction
- Identify heaviest page elements (HTML, JavaScript, etc.) & alert on images that aren't matching
- Transparent pricing (transactions X locations)—no extra charge for number of pages or number of alerts

Features

Monitor Internal, SaaS based, and Customer Facing Web Apps

Easily monitor internal (behind the firewall), customer-facing, SaaS, and cloud-based apps, and get an at-a-glance view into the status of all monitored applications using a slick Web-based dashboard.

See the Application's Page Load Times alongside Infrastructure Performance

Web Performance Monitor integrates with SolarWinds Server & Application Monitor (SAM) and Network Performance Monitor (NPM) to identify whether performance problems are due to slow loading page elements, an issue on the Web or application server, database, network, or application services.

Simple Pricing Model

Simply multiply the number of recordings (transactions) by the number of locations you want to monitor from to calculate the total number of licenses you need. No added charges for alerts and you can monitor multiple pages in each recording.

Easy-to-Use Transaction Recorder

Quickly and easily record complex multi-step transactions with absolutely no tedious scripting involved.

Monitor Total Transaction Latency & Load times for Individual Pages (steps)

Keep track of each step as a separate event, and measure the latency of each discrete step in a complex recording to accelerate troubleshooting.

Monitor Transactions from Multiple Locations

Web Performance Monitor provides the best flexibility with the ability to monitor transactions from locations within your firewall, from your Amazon EC2 instances, or from wherever you want.

Transaction Alerting/Notifications

Set warnings, custom timing thresholds for individual steps, and entire transactions. Further, get automatically notified when a transaction fails, indicating an application failure.

Website & Web App Performance Reporting

Web-based reports make it easy to generate quick reports on page load speeds, transaction health, website availability, and other key performance metrics.

Custom Properties

Give additional structure to your transactions, create dynamic groups, account limitations, or create groups for various resources.

Multi-Tenant UI

Monitor Web applications & websites for global businesses and for IT shops that manage multiple business services and applications.

Intuitive Dashboards

Web based dashboards help you quickly drill down to the root cause of the Web application issue.

Integration with Other SolarWinds Products

Integration with SolarWinds Server & Application Monitor & Network Performance Monitor

Web Performance Monitor is integrated with SolarWinds Server & Application Monitor so you can get a complete picture of Web performance issues—whether it's in the front end (CSS, JavaScript, Images, etc.) or the backend (database, OS, Web Server, network, etc.). Quickly identify a slow Web transaction using Web Performance Monitor, and then contextually drill into infrastructure components monitored by Server & Application Monitor or Network Performance Monitor to find the root cause of the problem.

Try Before You Buy. Download a Free Trial!

Don't just take our word for it. At SolarWinds, we believe you should try our software before you buy. That's why we offer an unlimited usage license in our free trial that delivers full product functionality. Simply download and install the software and start testing the performance of your Web applications. It's that simple!

System Requirements

hardware	minimum requirements
CPU	3 GHz Dual processor, dual core is recommended
Memory	3GB
Hard Drive	20GB free disk space is recommended
software	minimum requirements
OS	Windows Server 2003, and 2003 R2, Windows Server 2008, and 2008 R2, with IIS, version 6.0 and higher, in 32-bit mode, Windows Server 2012, and 2012 R2
.Net Framework	Version 4.0 .NET Framework or higher
Database	SQL Server® 2005 SP1 Express, Standard, or Enterprise SQL Server 2008 Express, Standard, or Enterprise, SQL Server 2008 R2

NOTE: The minimum server requirements listed assume default configuration. Significantly increasing the poll rate or statistic collection rate could result in additional load on the server, which may require a larger CPU or additional memory.

About SolarWinds

[SolarWinds](#) (NYSE: SWI) provides powerful and affordable IT management software to customers worldwide. Focused exclusively on IT Pros, we strive to eliminate the complexity in IT management software that many have been forced to accept from traditional enterprise software vendors. SolarWinds delivers on this commitment with unexpected simplicity through products that are easy to find, buy, use, and maintain, while providing the power to address any IT management problem on any scale. Our solutions are rooted in our deep connection to our user base, which interacts in our online community, [thwack](#)®, to solve problems, share technology and best practices, and directly participate in our product development process.
